Background and rationale

Provide a brief description of the situation existing at the time of the request and the need that the assistance aimed to address. For safeguarding of a particular element, provide a description of the element, its viability and why safeguarding measures were required. For preparation of inventories, strengthening of capacities, awareness-raising, visibility or other safeguarding not focussed on a particular element, identify gaps that were to be addressed. For emergency assistance requests, describe the nature and severity of the emergency at the time of the request.

Not fewer than 750 or more than 1000 words

Kayas are fortified settlements inhabited by Mijikenda communities whose cultural spaces are indispensable for the enactment of living traditions that underscore the identity, continuity and cohesion of the Mijikenda communities. The Mijikenda include nine Bantu-speaking ethnic groups in the Kaya forests of the coastal Kenya. The identity of the Mijikenda is expressed through oral traditions and performing arts related to the sacred forests, which are also sources of valuable medicinal plants. These traditions and practices constitute their codes of ethics and governance systems, and include prayers, oath-taking, burial rites and charms, naming of the newly born, initiations, reconciliations, marriages and coronations. These Traditions and Cultural Practices associated to the Kayas have bound them in harmony with the natural environment for a long time.

The use of natural resources within the Kayas is regulated by traditional knowledge and practices that have contributed to the conservation of their biodiversity. The Kambi (Councils of Elders) acts as the custodians of these Kayas and the related cultural expressions. The Mijikenda communities were gradually abandoning the Kayas in favour of informal urban settlements. Due to pressure on land resources, urbanization and social transformations, the traditions and cultural practices associated to the Kaya settlements were fast diminishing, posing great danger to the social fabric and cohesiveness of the Mijikenda communities who venerate and celebrate them as their identity and symbol of continuity.

Despite legislation classifying the Kayas as national monuments and creating the forest reserve, leading to their inscription as cultural landscapes on the World Heritage List, and despite the continuing importance of the Kayas for burial and ritual practices, complex forces including modernization, emigration of community members to urban areas and changing land-use practices around the forest were putting the viability of the traditions and practices associated to the Kayas at risk.

However, the traditions and practices associated with the cultural space of Kaya forests are still viable and constitute an important basis for their identity and ultimate survival of the communities. The Councils of Elders continue to have, alongside their traditional knowledge in managing Kaya forests and performing traditional rituals, an important function of governance. This involves rendering of social justice, maintaining peace and harmony within and between the communities, and coordinating the use of natural resources of the Kaya forests.

The traditions and cultural practices associated to the Kaya are regulating mechanisms for a cohesive social order that upholds peace and inclusive harmonious life amongst the Communities. Leaders seek blessings from the Council of Elders before making major decisions such as venturing into political contests. The Council of Elders evaluates them on the basis of their moral behaviour, braveness and the ability to lead. In the absence of the traditions and practices associated to the Kayas, irresponsible behaviour could find root among the Mijikenda. The traditions of the Mijikenda have worked to reduce wayward behaviour such as theft, promiscuity, intolerance and corruption.

Modernization, formal education, influence of religion, tourism, land reforms and migration, among other factors, led to the diminished enactment of traditional practices related to the Kayas. Given the advanced age of most of the elders, continued transmission of the
traditions and practices related to the Kaya was at great risk. There was a strong wish among the Mijikenda to safeguard their traditional practices together with the associated cultural spaces that are indispensable for their enactment. Holistic safeguarding of the intangible cultural heritage of the Mijikenda, in relation to the sacred forests of the Kaya, can largely be achieved by simultaneous measures flowing forth from inscription on the lists of both the UNESCO 1972 and 2003 Conventions.

The international assistance for the implementation of the project on the Safeguarding of the traditions and practices associated to the Kayas in the sacred forests of the Mijikenda aimed at achieving the following:

i. To empower the Mijikenda communities with skills and strategies of promoting viability and ensuring transmission of the traditions and practices associated to the Kaya Forests.

ii. To disseminate existing information related to the Mijikenda traditions and practices to the public with a view of raising awareness.

iii. To educate the youth and other community members on the importance and significance of the traditions and practices associated to the Kaya sacred forest.

iv. To promote cooperation and networking amongst communities.

v. To promote the management and environmental conservation of the sacred Kayas of the Mijikenda.

vi. To put in place favourable legislative and management framework in support of the safeguarding measures.

Upon achievement of the above objectives, the traditions and practices of the Mijikenda will be transmitted among the various ethnic groups in the Kaya cultural landscape. This will strengthen community ties and reinforce their common identity, while promoting mutual respect and social justice and ensuring balanced protection of their forest environment.

**Objectives and results attained**

Overall, to what extent did the project attain its objectives? Describe the main results attained, focusing in particular on the perspective of the direct beneficiaries and communities. For each expected result identified in the request, explain whether it was fully or partially attained. Also describe any unexpected results, direct or indirect, whether positive or negative.

Not fewer than 100 or more than 500 words

The overall objective of the project was to conserve and enhance the unique cultural and natural heritage of the Kaya forests as well as increase the additional income of the Mijikenda communities and empower them to ensure viability and transmission of the traditions and practices associated to the Kayas of the sacred forests of the Mijikenda.

The primary objectives addressed in the safeguarding plan are as follows:-

i. To empower the Mijikenda communities with skills, knowledge and resources to promote viability and ensuring transmission of the element.

ii. To disseminate existing information related to the Mijikenda traditions and practices to the public with a view of raising awareness.

iii. To educate the youth and other community members on the importance and significance of the traditions and practices associated to the Kaya sacred forest.

iv. To promote cooperation and networking amongst communities.

v. To promote the management and environmental conservation of the sacred Kayas of the Mijikenda.

vi. To put in place favourable legislative and management framework in support of the
safeguarding measures.

The project has achieved the following concrete results:

i. Empowered Mijikenda communities with skills of safeguarding the communities' Intangible Cultural Heritage and knowledge on project management. Cumulatively, nine Mijikenda communities have been capacity built in project design and management. The generated income is used to support the enactment of their rituals to enhance continued practice. The enhanced income has also contributed towards meeting subsistence and livelihood needs of the local communities in Kaya areas.

ii. Public awareness raised on the Mijikenda traditions and practices associated through the production and dissemination of brochures. The existing information regarding the Mijikenda traditions and practices associated with Kayas has been availed to the public. To date, approximately six thousand (6,000) brochures have been distributed.

iii. An educated youth and other community members well-informed of the significance of the traditions and practices associated with Kayas has enhanced transmission and acquisition of knowledge of the traditions and practices associated to the Kayas.

iv. Network and teamwork established amongst communities. The promotion, cooperation and networking amongst communities through festivals have strengthened inter-community relations.

v. Conserved environment and well managed sacred Kayas of the Mijikenda. Increased public knowledge of the traditions and practices was a source of pride beyond the local village environment and this attracted foreign visitors and tourists.

VI. The process of putting in place favourable legislative framework has been initiated to support safeguarding measures.

At the inception of the project, it was not foreseen that the youths will be enthusiastic to learn the traditions and practices of the Mijikenda but now there is an overwhelming support and curiosity by the school going youth who had not acquired the opportunity to visit the Kayas. The growing interest among young generations has enhanced transmission of the traditions and practices of the Mijikenda.

Description of project implementation

Provide a description of the activities undertaken and the outputs they generated (e.g. trainings, consultation process, technical assistance, awareness raising, publications, toolkits, etc.) Also describe any problems encountered in project delivery and corrective actions taken. Describe the role of the implementing agency and implementing partners in carrying out activities and generating outputs.

Not fewer than 1000 or more than 1500 words

During the Kaya project implementation, the Department of Culture in collaboration with the Mijikenda communities and other stakeholders undertook several activities. The activities included empowering the Kaya elders with skills on project design and management, apprenticeship, reviewing and integrating of information into the national inventory, disseminating existing information through printing and distribution of brochures, field visits to the Kayas by the young people; monitoring of the income generating projects started for communities living adjacent to the Kaya forests, intercommunity Kaya elders exchange programme, and the intercommunity cultural festivals. The identification of volunteer site caretakers and payment of their subsistence support

The major activities that were carried out in the implementation of the project in order to achieve the expected results include:

i. Training Workshop on project design and management for nine Kaya communities in order to empower nine Mijikenda communities with skills on project design and
management;

A total of forty-six (46) Kaya elders from the Mijikenda Kaya communities have been capacity built on project design and management. The project commenced with designing and initiating income-generating activities taking into account the specificities of each Mijikenda community. Ninety (90) langstroth bee hives, Twenty-four (24) catcher boxes, Sixteen (16) smokers, Fourteen (14) wheel barrows, Sixteen (16) bee suits, Eighteen (18) pairs of gum boots, Nine (9) watering cans, Fifteen (15) hoes, Fifteen (15) machetes, Fifteen (15) spades, assorted seeds, assorted honey processing and packaging materials were bought and distributed to nine Kaya Mijikenda communities. Experts in tree nurseries and bee-keeping were engaged to assist the communities to establish the projects. The individual woodlots established in homesteads of Kaya elders have reduced dependence on forest resources such as firewood, timber and building poles. Most Kayas have generated income from the sale of honey and seedlings and in turn the same is used to support the enactment of ceremonies and rituals and supplements family incomes.

ii. Apprenticeship;

Young members of the Mijikenda community volunteer to undergo apprenticeship so as to gain knowledge and understanding of the practices as they prepare to become future members of the Council of elders. For example, Kaya Kauma started conducting ceremonies and rituals from 23rd November to 13th December, 2013, aimed at inducting ten young members of the community into the Council of elders.

iii. Reviewing and integrating of information into the national inventory;

The Department of Culture organized consultation workshops for the nine Mijikenda communities to sensitize them on community inventorying. The workshop focused on community participation in the identification and inventorying of intangible cultural heritage. Since the inscription of the element, the department of Culture has been holding frequent consultation meetings with nine Mijikenda communities and their council of elders. These meetings have been invaluable in gathering information about the culture of the Mijikenda. The information obtained so far has been used to review and update the National inventory.

iv. Disseminating existing information through printing and distribution of brochures;

Six thousand (6,000) brochures in both English and Kiswahili have so far been printed and distributed to members of the public and stakeholders in order to raise public awareness about the project as well as about the existing information related to the Mijikenda traditions and practices. In addition the Daily Nation newspaper carried out a paid-up newsletter supplement on the Intangible Cultural Heritage of the Mijikenda Kayas.

v. Field visits to the Kayas by the young people;

The Kaya elders are the custodians of the traditions and practices associated with the sacred forests of the Mijikenda. Kaya traditional ceremonies and rituals are led by elders, some of whom are of an advanced age to undertake cultural activities and ceremonies. Due to this, there is a danger of traditional knowledge being lost as the elders die without the opportunity to pass on their knowledge to the youth. The Councils of elders invited schools into the Kayas where the elders informally introduced the learners to the traditions and practices of the Mijikenda. Galana Secondary school students visited Kaya Rabai, Chizini primary school pupils visited Kaya Gandini of Duruma community, Kinondo primary and Makongeni primary school pupils visited the neighbouring Kaya Kinondo (Digo), Dzitsoni secondary school students visited Kaya Fungo of Giriama Community, Dindiri secondary school students visited Kaya Ribe while Ribe boys secondary school students and Tsangwa primary school pupils visited Kaya Jibana. The visits helped to transmit knowledge to the young generation thereby safeguarding the element. A total of 420 students visited the Kayas.

vi. Conservation of the Kaya forests;
In Kaya Chonyi and Kaya Kinondo, community conservation groups consisting of the young and older members of the community have been formed to sensitize the youth on the importance of conserving the forests and safeguarding the traditions and practices associated with the sacred forests of the Mijikenda. A similar project has been started in Kaya Rabai, Kaya Jibana, Kaya Ribe, Kaya Mutswakara and Kaya Kauma.

vii. Carrying out monitoring and evaluation activities at various levels;

Monitoring and evaluation is an on-going process. A team of members of staff from the Department of Culture, National Museums of Kenya (Coast Forest Conservation Unit in Kilifi and Kwale), representatives of the County Government, representatives of the County Commissioner in collaboration with other stakeholders went round to meet all the nine Kaya committees of elders and had discussions with the implementing committee members. Most Kaya sites reported great progress in their income generating projects. Since the inception of the project aimed at safeguarding the element, every visit made to the Kaya conducted some monitoring and evaluation to assess the progress so far made. Any shortcomings noted were followed by suggestions on their improvement and way forward. At each site, specific interactions with the team members unearthed challenges whose suggestions for improvement were given out. Significant progress on the projects was testified except for Kaya Kauma beekeeping project whereby it was reported that the hives were un-colonized with bees while the remaining have been eaten off by ants and are in a terrible state. The team was able to sample some honey produce from the kaya sites. The tree nursery project was successful despite the lack of markets to mop up the excess seedling produced. As has been the tradition with the Kaya project, the climax of activities was the intercommunity cultural festival. The festivals attracted the largest crowd ever witnessed in a public ceremony around the Kayas.

viii. Inter-Community Cultural exchange programmes;

The inter-community exchange visits was carried out and it involved Kaya elders, women and youth from all the nine Mijikenda Kayas visiting each other at their respective Kaya locations. The purpose of the visits was to learn from their peers on how they were progressing with projects, intercultural linkages, cooperation and networks for the promotion of intangible cultural heritage activities related to the Kayas. During the intercommunity cultural exchange visits, the projects committees for various Kayas were able to exchange information on the challenges faced and how to address them with local available materials.

ix. Community cultural festivals;

The Department of Culture in collaboration with the Mijikenda communities and other stakeholders organized community cultural festivals and exchange programmes. Three inter-community cultural festivals were held on 8th September, 2012, at Kaya Rabai, 15th April, 2014 at Kaya Fungo, Giriama and 29th January, 2016 at Kaya Kambe. The festivals showcased the diversity of the traditions and practices of the Mijikenda. There were displays of cultural exhibits of the Kaya traditional lifestyle such as making Makuti thatches, display of traditional medicine, traditional foods exhibitions and handcrafts. To witness this rare assembly of living culture of the Mijikenda were the Communities concerned and graced by other invited guests. The festivals were attended by representative of the concerned Kaya communities and graced by senior government officials including Principal Secretary, Ministry of Sports, Culture and the Arts, the County Executive Committee Members in charge of Culture, County Commissioners, County administrators, local leaders, Kenya National Commission for UNESCO, among others. Approximately 450 Kaya elders and over 1,800 community members were in attendance.
Community involvement

Provide a description of the mechanisms used for fully involving the community(ies) concerned. Describe not only the participation of the communities as beneficiaries of financial support, but also their active participation in the planning and implementation of all activities.

Not fewer than 300 or more than 500 words

Involvement and participation of communities in planning and implementation of the 2003 UNESCO Convention for the Safeguarding of the Intangible Cultural Heritage is very crucial. The Department of Culture in cooperation with the National Museums of Kenya through its Coastal Forest Conservation Unit, the Mijikenda communities, groups and individuals concerned organized a series of meetings to plan on how to safeguard the traditions and practices associated to the Kayas of the sacred forests of the Mijikenda. The first activity involved representatives of Kaya elders, women and the youth who were trained on project management related to bee-keeping with a view to generate income for the communities. The training equipped them with skills and knowledge to guide the implementation activities in their respective Kayas.

Field visits to the Kayas by students from various schools were organized by respective communities where the elders informally introduced the learners to the traditions and practices of the Mijikenda. The visits helped to transmit knowledge to the young generation thereby safeguarding the element. The student visits to the Kayas is a clear testimony of the willingness of the young generation to learn from the elders their cultures. The community members mobilized the schools, guided them inside the Kayas and were enthusiastic to induct the youth who were excited by what they saw and learnt.

The inter-community cultural exchange visits between the communities involved youth, men and women living around the Kayas and this helped communities to share their experiences and challenges in safeguarding the element. During the intercommunity cultural exchange visits, the project committees for various Kayas were able to exchange information on the challenges faced and how to address them. The annual inter-community cultural festival brought together all the communities living around the Kayas who displayed cultural performances, rituals and exhibits of the Kaya traditional lifestyle such as making Makuti thatches, indigenous medicine, traditional foods and handcrafts which formed some aspects of the element and this strengthened the members who have pledged to keep these traditions alive by transferring them to the younger generations.

The Department of Culture, being the competent body for the implementation of the Kaya project, facilitated and coordinated all the above activities in collaboration with the Mijikenda communities and other Government agencies such as the Permanent Presidential Music Commission, National Museums of Kenya through its Coastal Forest Conservation Unit, County governments, County administrators and the local leaders. The aforementioned bodies together with other technical experts provided the human resources required for the implementation of the project.
Sustainability and exit/transition strategy

Describe how the benefits of the project will continue after the project has been completed. Where appropriate, describe the steps undertaken to ensure the following:

- Sustainability of activities, outputs and results, including with reference to how capacity has been built under the project. Also describe any planned follow-up measures to ensure sustainability.
- Additional funding secured as a result of this project, if any. Indicate by whom, how much and for what purpose the contributions are granted.
- Describe how the ownership (of activities, outputs, results) by stakeholders and the community(ies) in particular has been promoted.
- Describe, if relevant, how tools, processes, outputs, etc. have been adopted, adapted, replicated and/or extended for future use (e.g. in other regions, communities, elements, or fields of intangible cultural heritage).

Not fewer than 100 or more than 500 words

Safeguard the traditions and practices associated with the Kayas in the sacred forest of the Mijikenda involves all Mijikenda communities at all levels of its implementation. The project has promoted their socio-economic development thus strengthening their common identity, mutual respect and social justice while ensuring balanced protection of their forest environment as well as raising interest among young generations.

The Department of Culture in partnership with National Museums of Kenya through its Coastal Forest Conservation Unit, Kenya Forest Service, and local administrators have sensitized the Mijikenda communities about the sustainability of the project and incorporated follow up programmes on the progress of the income-generating activities. Through the proceeds from the income generating activities initiated, the Mijikenda communities continue with the enactment of their traditions and practices while part of the income is recycled back to boost the project activities.

Given the fact that many of the elders are ageing, most Kayas have started recruiting and training young and energetic elders for continued transmission and enactment of the element. In Kaya Kauma and Kaya Fungo, for instance, induction ceremonies for young members of the community are ongoing to join the council of elders. In Kaya Rabai, Kaya Fungo and Kaya Kinondo, student's visit to the Kayas has been intensified. The same trend is witnessed in the rest of the Kayas. The Council of elders transmit knowledge about the traditions and practices to the young generation through apprenticeship. Through observation, participation and inheritance, these young men will later take up the roles of the incumbent members of the Council. Regular traditional festivals held by Kaya communities play an important role in the transmission process.

Now than ever before, an overwhelming majority of the Mijikenda communities have a strong attachment to their traditions and practices. The sustainability of these traditions and practices are pegged on the fact that the Mijikenda community respect them and are committed to safeguarding them for posterity.

The Kenya Forest Service has started a programme to educate the community to harvest their own seeds from the forest to sustain the tree nurseries. Replanting trees in depleted sacred Kaya forests and homesteads have reduced reliance on the sacred forest for wood fuel. The activities have improved conservation of the forests, enhanced safeguarding and raised public awareness about the element particularly among the local communities.

Holding community cultural festivals is one of the Department of Culture's annual targets and has allocated funds for that purpose. In this regard, the Department of Culture will continue monitoring and evaluating the Kaya project as well as support Mijikenda community cultural festivals in order to sustain the enactment of their traditions and practices.

In the recently concluded Kaya Kambe community cultural Festival, the Chief Guest of Honour Dr. Evangeline Njoka (Secretary General/CEO KNATCOM) pledged to organize an
Lessons learnt

Describe what are the key lessons learnt regarding the following:

- Attainment of expected results
- Ownership of key stakeholders and community involvement
- Delivery of project outputs
- Project management and implementation
- Sustainability of the project after the financial assistance

Not fewer than 300 or more than 750 words

a) Attainment of expected results;

I. Planning and implementation of project activities should involve all stakeholders concerned with the project.

II. Collaborative partnerships are vital for effective attainment of expected results.

III. Frequent consultation with all participating partners and community project members helped to put the project on track.

IV. Definition of clear channels of communication between the projects implementing organization and the actors on the ground is very vital.

V. Information sharing regarding project challenges and strengths with all stakeholders is a valuable tool in the attainment of expected results.

VI. Establishment of project committees to oversee the project on the ground and provide timely and accurate information to the implementing organization is crucial.

VII. Honesty and clarity of project objectives to all project partners with its implementation is a vital requirement.

VIII. Integrity and transparency in the use of project finances is important for the success of the project.

IX. The project requires constant monitoring and evaluation as well as putting in place corrective measures to maintain the project's intended purpose.

b) Ownership of Key stakeholders and community involvement;

I. The community and all stakeholders should demonstrate clearly and practically that they own the project. Ownership of the project by the stakeholders and the community begins from the planning stages.

II. Involvement and inclusiveness of community members with the project including men and women, the youth, opinion leaders, local administration, bearers and practitioners of the safeguarded element enhances ownership of the project.

III. Mechanisms should be put in place to allow the involvement/entrance of new stakeholders who were previously not considered in the project when and at any time such stakeholders demonstrate and prove that they indeed have a stake in the project.

c) Delivery of Project Outputs;

I. Delivery of project outputs requires a clear understanding of the project objectives by all concerned.

II. It provides motivation to all concerned and the willingness to constantly improve on perceived weakness for better outputs.
III. It needs flexibility in the manner at which activities are undertaken.

IV. The ability to quickly change and adapt to new and better ways of doing things helps in delivery of outputs.

d) Project management and implementation;

I. Training of the project team is crucial for successful management and implementation.

II. The management team must get a clear focus on how the project is to be implemented and brings congruence of ideas during the implementation period.

e) Sustainability of the project after the financial assistance;

I. Sustainability of the project is based on the ability of the Kaya communities to continue with the enactment of the element after official assistance ends. The Kaya project was designed to equip the Kaya elders and Kaya adjacent communities with livelihood skills that will enable them earn a living and continue with the enactment of the element. Success stories of the project have been reported in almost all the Kayas where proceeds (financial) have enabled the elders earn a living and also use the same to buy ritual items to be used for further enactment of the practices and traditions.

II. The bee-keeping project has to a larger extent been very successful and has provided income to the communities living adjacent to the Kayas as well as the elders. The tree nurseries project established in many Kayas have been quite successful. The Kaya communities have been replanting tree seedlings in the Kayas where the Kaya had been depleted as well as establishing woodlots in their homesteads and also selling some. These two projects are expected to be sustained even after the financial assistance gets to an end.

III. The Kaya elders have started organizing their own inter-community cultural exchange programs after realizing the benefits of the project. Sharing of information through this programme has been a good forum to learn from one another.

IV. Constant monitoring and evaluation of the project by the Department of Culture after the funding closes will also work to give the communities motivation to move on with the project. The Department of Culture together with other stakeholders will continue to work with the Kaya elders to make sure that the element continues to be safeguarded through the proceeds from the project and also through continued transmission of the traditions and practices associated to the Kayas to the young generation.

Annexes

List the annexes and documentation included in the report:

- publications, evaluation reports and other outputs, when applicable
- progress reports prepared during the contract period
- list of major equipment provided under the project and status after termination of contract period
- other (please specify)

The following are annexed to this report:

i. A detailed signed financial statement of accounts presented on official letter head paper on all expenses incurred as per the third instalment within the framework of the present contract;

ii. All original evidence of payments, such as original receipts, invoices, etc.; and

iii. A signed and dated original Invoice on official letter head amounting to USD 25,316.00 for the fourth instalment and final payment.
